AT A GLANCE

BETSTOA at a glance

Not a blueprint — a complete system, ready to hand over.

 11 Sports	 Global Usable in any language worldwide	 3,800+ Casino games · 30 providers	 38 Minigames
 18 In-house 3D arcade games	 USDT·USDC Multi-chain, real-time	 Multi-tier Partner levels created on demand	 24/7 AI support · any language

All-in-one — nothing to bolt on

Sportsbook

Pre-match · parlays · sport-specific markets

In-play

Live odds · auto-close at full time

Live tracker

Animated coverage, 11 sports

Live score

Real-time scoreboard, all sports

Predictions

9 categories · live probabilities · any language

Casino

Live & slots, 3,800+

Minigames

Crash · Plinko · sports games

3D Arcade

18 in-house 3D games

Virtual game

Free virtual-money mode

Live wins feed

Real wins and coin transfers, shown live

Crypto Wallet

Cashier · coin prices · futures sentiment

MetaMask wallet

Wallet connect · signature sign-in · send

Partner system

Agency levels auto-created, as deep as you need

Ops board

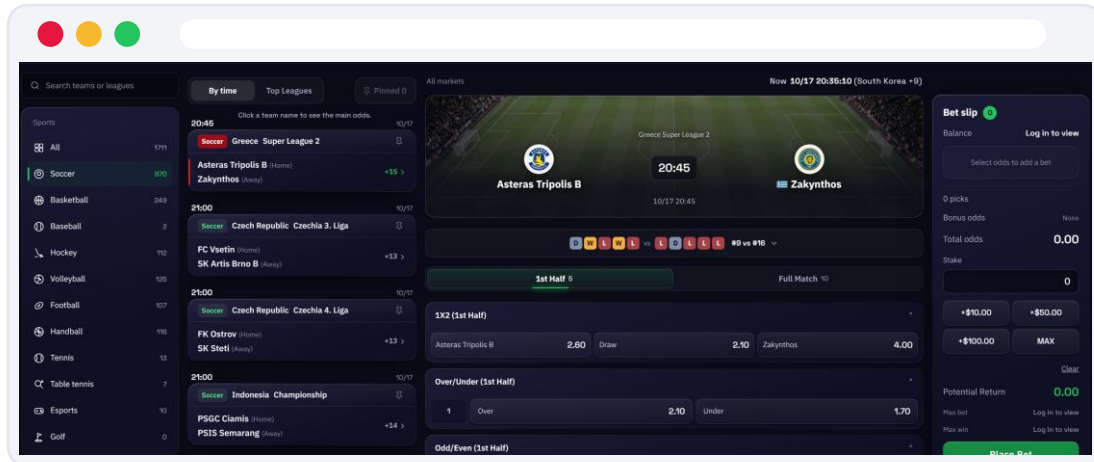

Live revenue, risk & player flow

AI support

Any language · crypto Q&A · human handoff

Sports & In-play

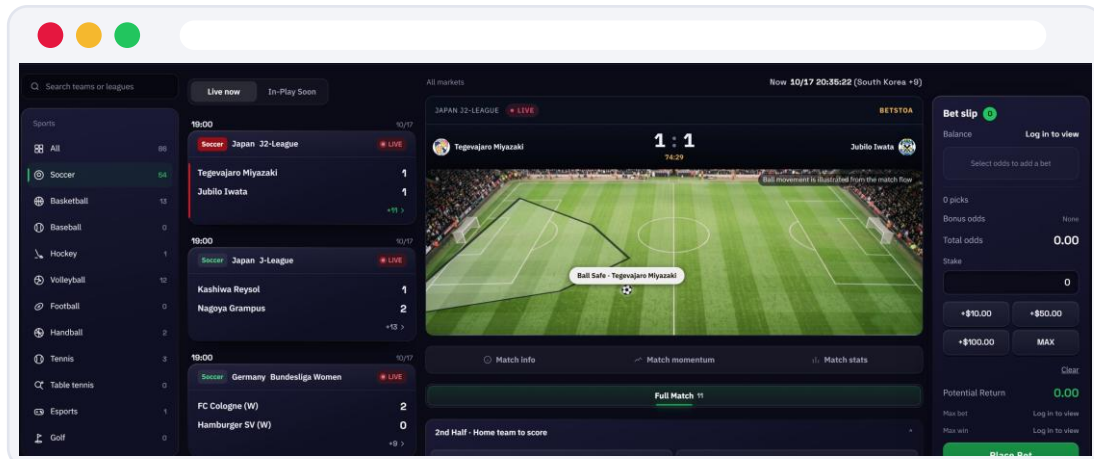

11 sports, pre-match and in-play, with sport-specific market layouts

Live odds updates with bet-acceptance delay — stale-odds abuse blocked

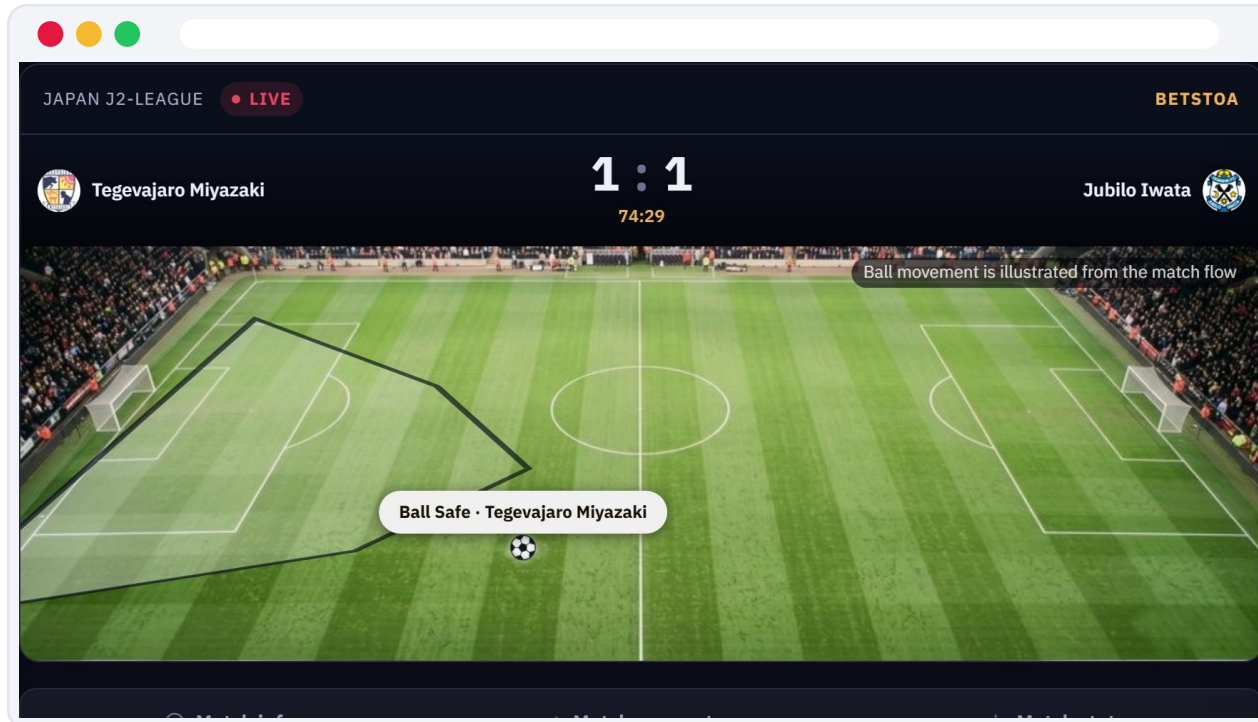

Markets close automatically at full time and disappear from players' screens within a second — no refresh needed

The bet slip survives page refreshes and menu changes

Parlay rules, per-sport odds floors and stake limits, adjustable instantly

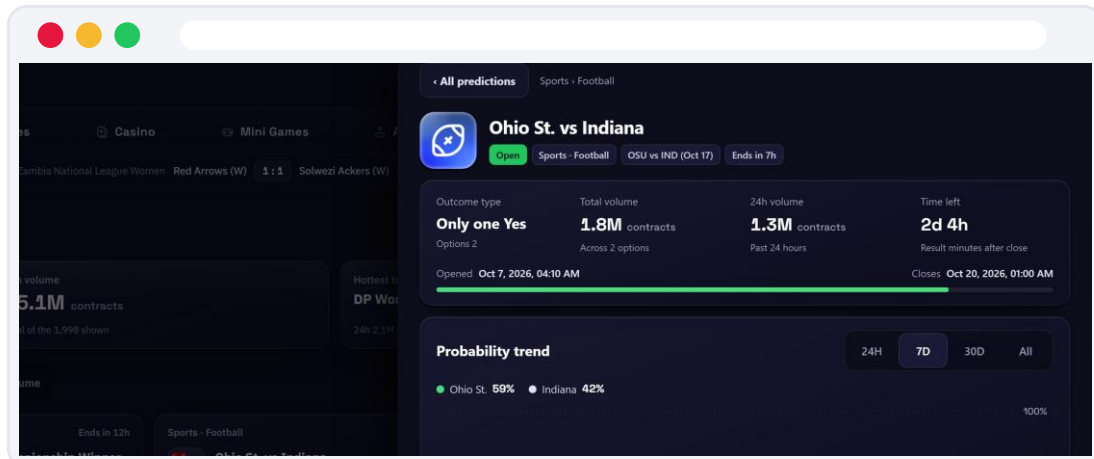

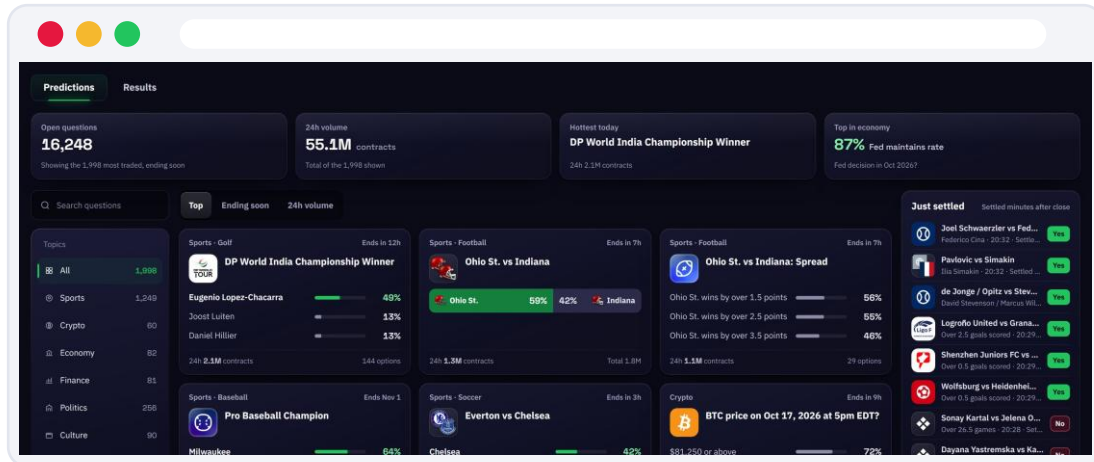

Live match tracker — built on our own engine

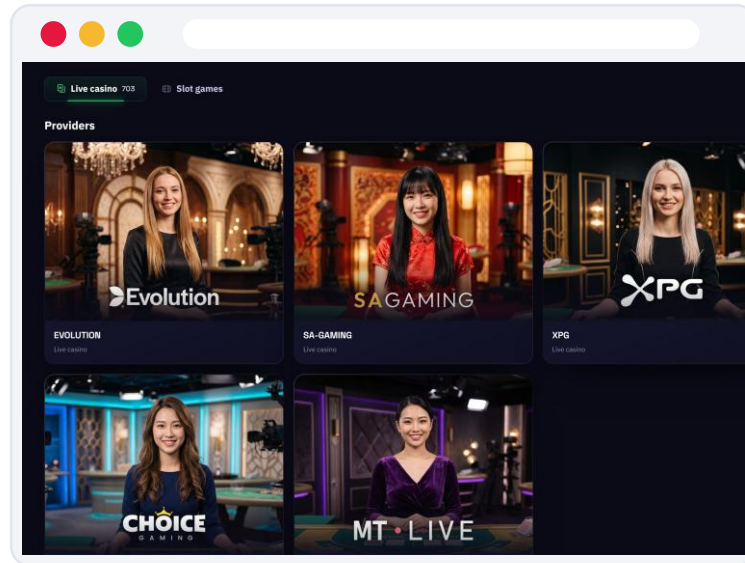

- Ball, players and scoring moments animated — usually a separately licensed product
- Sport-specific motion — baseball runners and counts, basketball shots, hockey pucks, tennis serves
- Same proportions on every screen, with match flow, stats and details in one panel

Prediction markets — a probability for every question

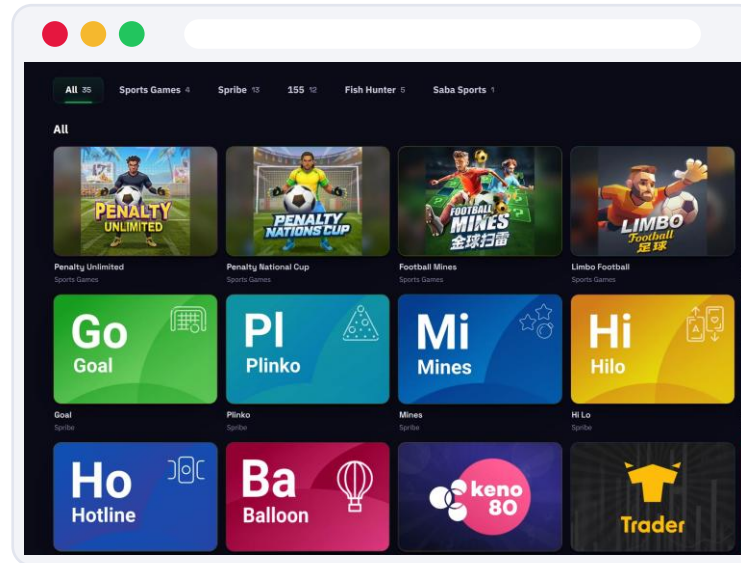

- 9 categories — politics, economy, sports, crypto, weather and more — with live probabilities from real trading worldwide
- A probability-trend chart on every question; settled questions stay in a Results tab for 30 days
- Questions and resolution rules auto-translated into each language · team logos on match questions
- Tap a question to open a slide-in detail panel — without leaving the list

Casino · Minigames · 3D Arcade

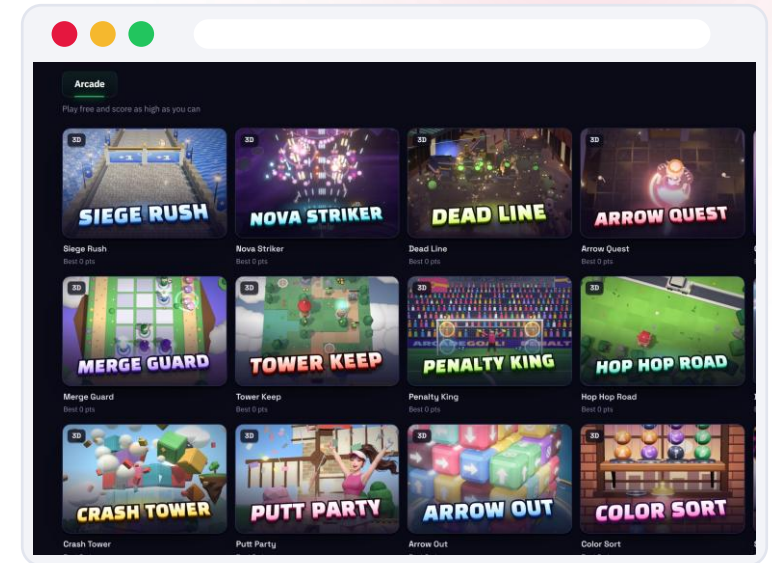

1

Live casino and slots, 3,800+ games, KRW / USD handled automatically

2

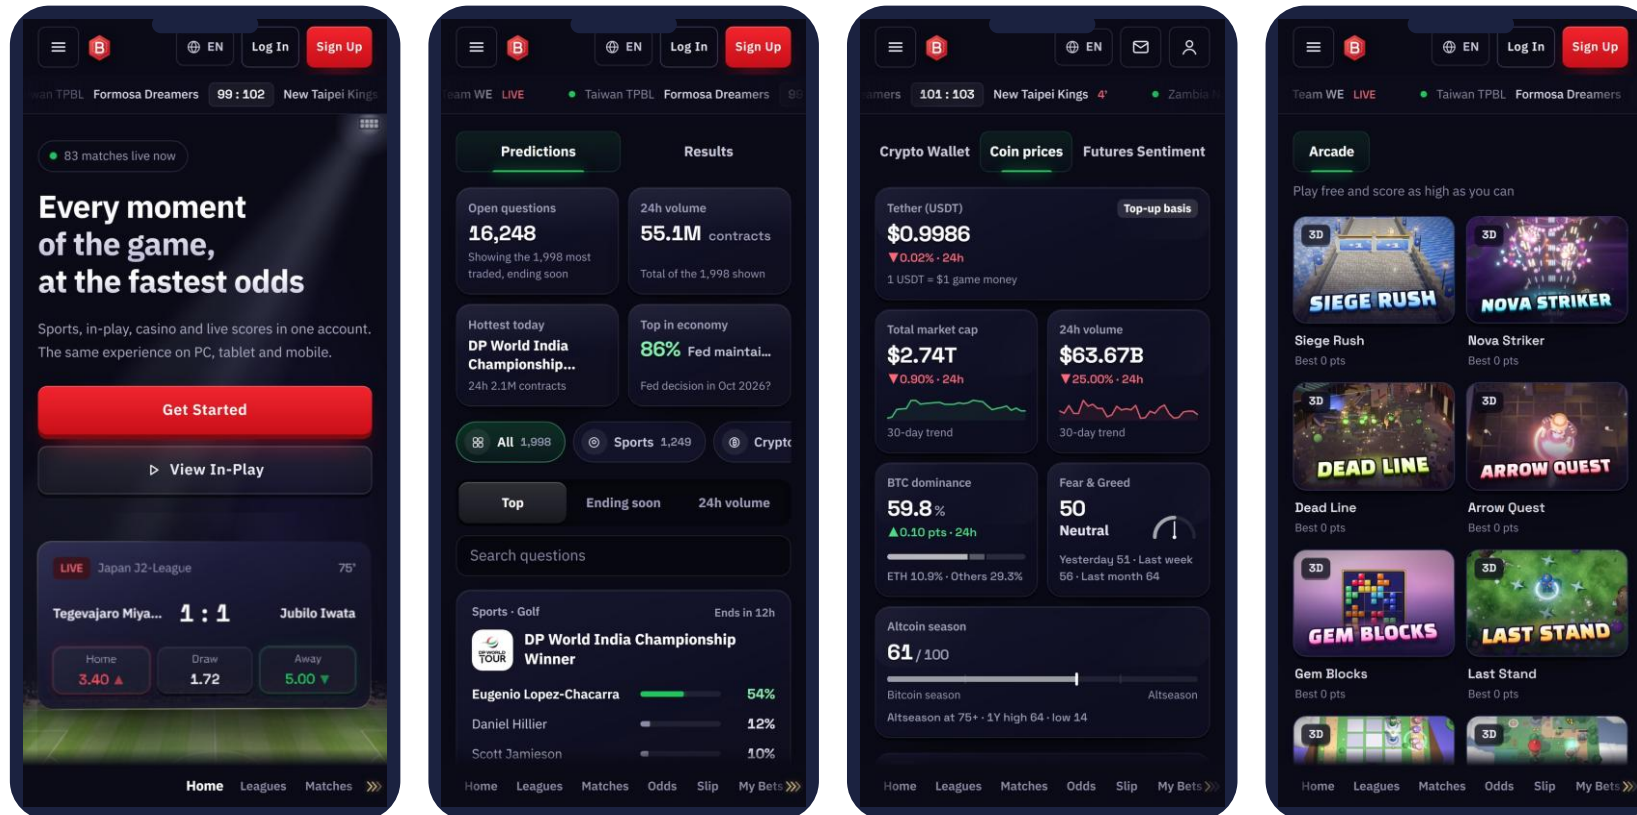

38 minigames — crash, Plinko and a sports-themed collection

3

18 in-house 3D arcade games — free content that brings players back every day

Mobile first

- Designed for phones first — one-thumb betting
- Slide-in side panels keep predictions, coin details and bet history in one flow
- Even the 3D games run at 60 fps on a real Galaxy device
- No install needed — same account, same wallet

Proprietary engine — Odds · Settlement · Ledger

01

Odds & risk engine

Normalizes feed data per sport and market and decides suspend, resume and odds floors automatically.

02

Multi-check settlement

Results are cross-checked in several stages. Premature 'final' signals and inconsistent scores are caught before any money moves.

03

Double-entry ledger

Every movement of money is booked debit and credit, and keyed so the same payout can never happen twice.

04

Rules hardened by live data

Hundreds of edge cases found by recording real match data and turned into rules — invisible from the outside.

Security — layered from day one

1

Network

Encrypted tunnels only · no secrets on the public server

2

Access

Admin is invisible outside allow-listed IPs · 2FA (TOTP) · partners enter by ticket only

3

Accounts

Login lockout · new-IP alerts · automatic IP blocking · country blocking · wallet-signature sign-in

4

Money

HMAC-signed payment callbacks · exactly-once transactions · audit log of every admin change

5

Code

Minified front-end · zero source maps · domain-locked games · engine code lock mode

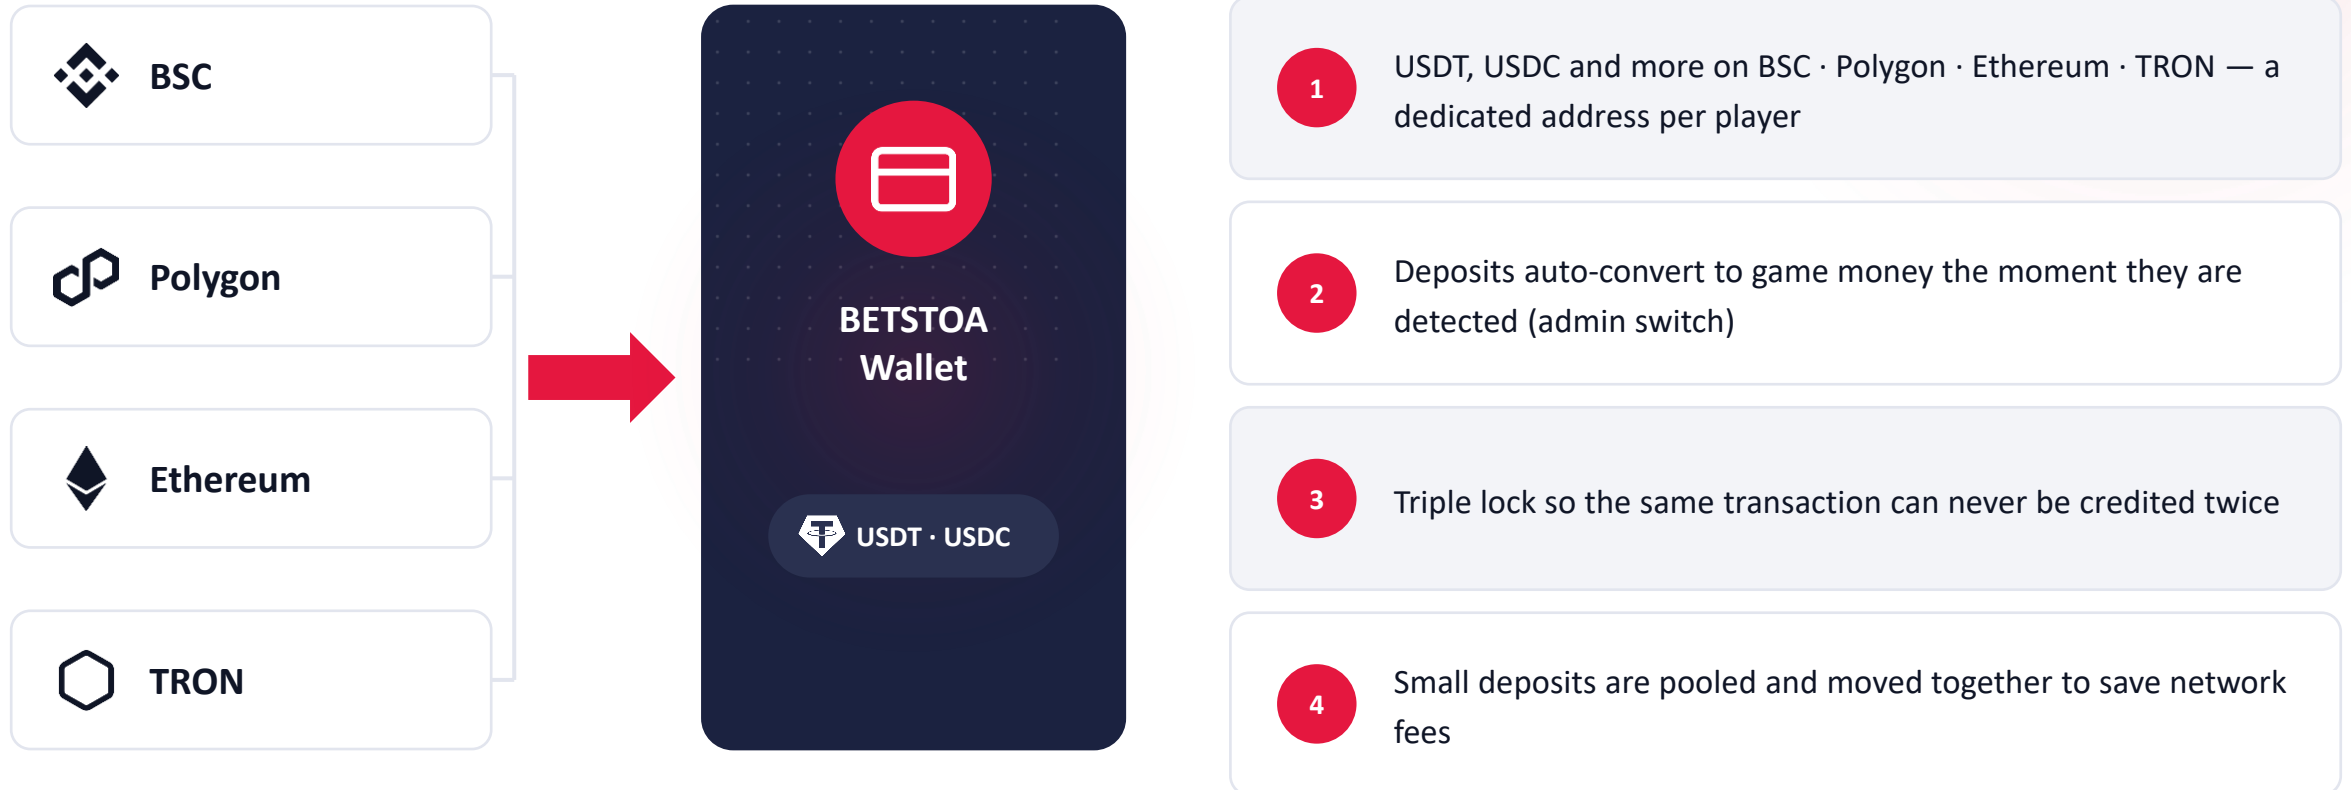

6

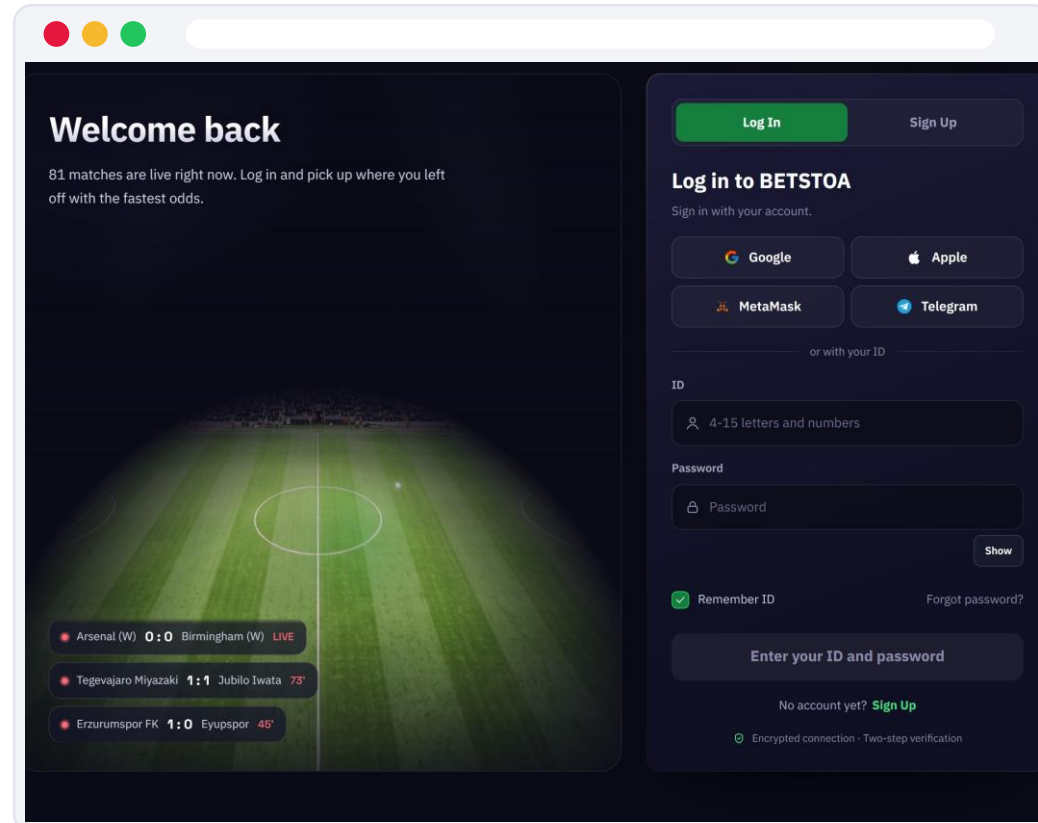

Traffic

AI-scrapers and site-ripper blocking · per-IP rate limits · no third-party framing

Crypto payments — instant, exactly once

MetaMask · Web3 wallet integration

The MetaMask button on the sign-in screen — sign in with one wallet signature

1

With MetaMask integration, any EVM-based coin can be linked and converted into game money

2

No sign-up required: players bet through MetaMask, and winnings are paid out automatically to their linked MetaMask wallet

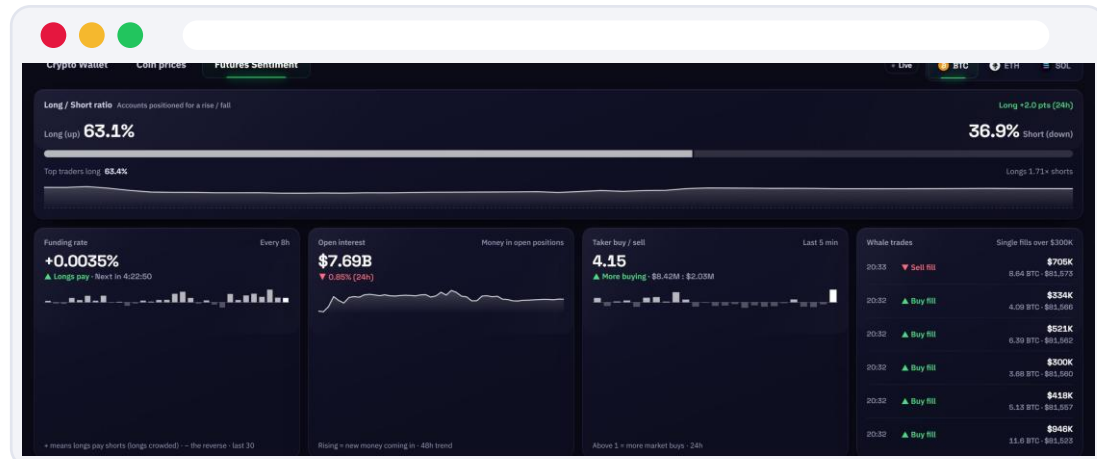

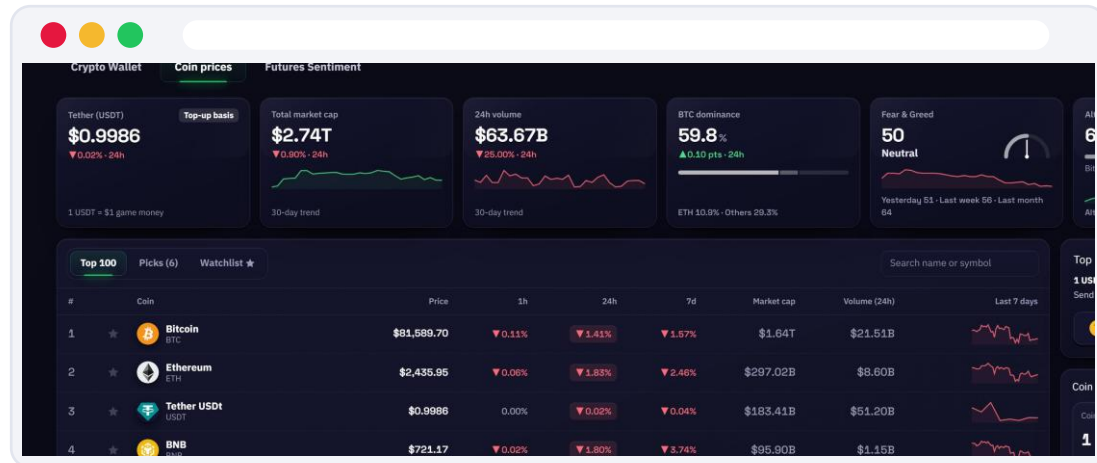

3

Powerful asset protection built in — a decentralized wallet, 1024-bit or higher advanced encryption algorithms and risky-withdrawal prevention

EVM wallet connect · signature sign-in

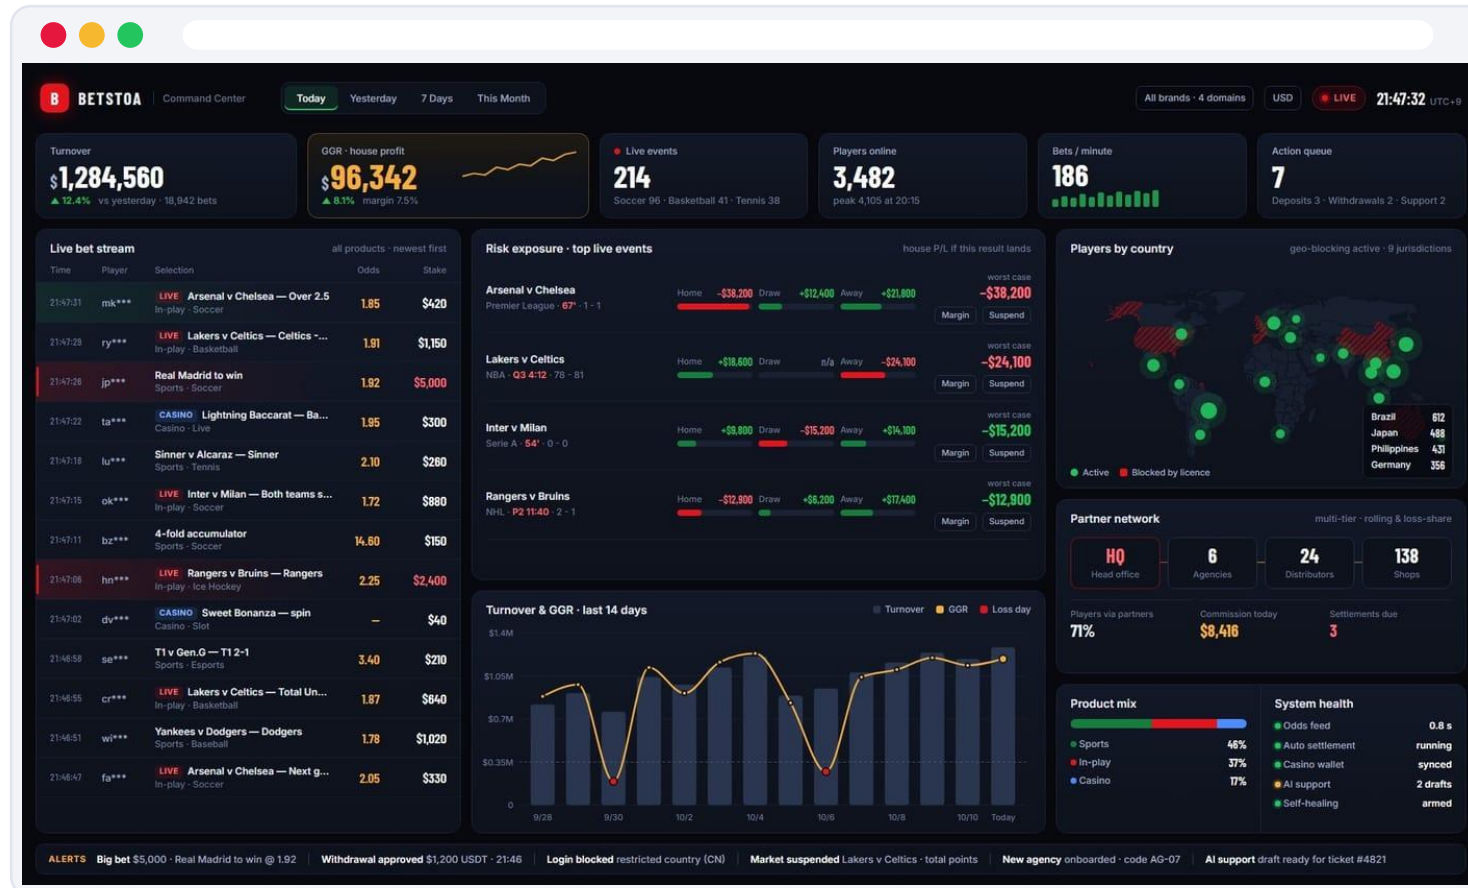

Send with MetaMask · BEP-20 · Polygon · ERC-20

Crypto Wallet — live coin prices & futures sentiment

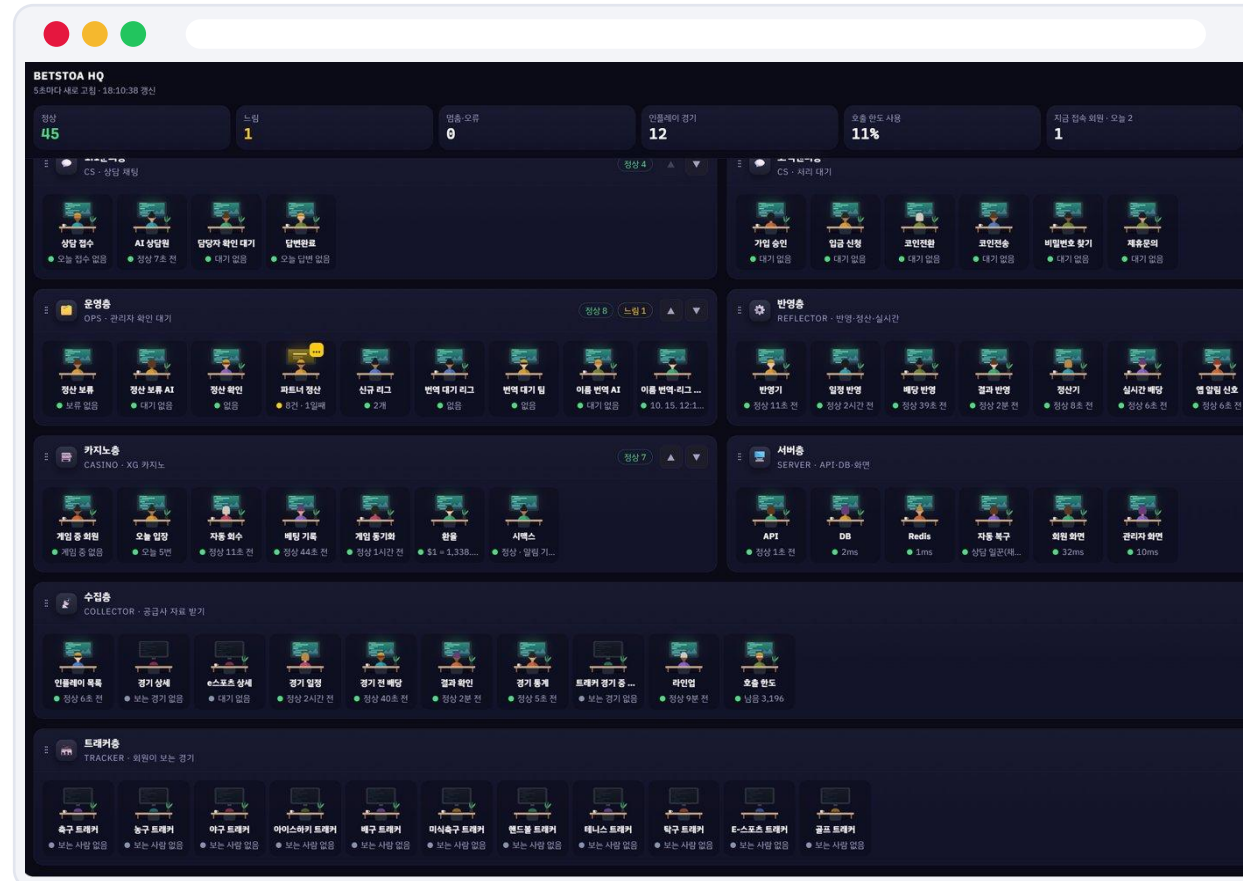

- Coin prices — top 100 coins in real time, 7-day charts, market cap and a coin calculator
- Market mood — Fear & Greed, Altcoin Season and BTC dominance, each with a slide-in detail panel
- Futures sentiment in real time — long/short ratio, funding rate and open interest
- Taker buy/sell flow and whale trades — numbers that move every second
- Up/down colors follow the language — red for up in Korean, green for up elsewhere

Operations board & admin

- Revenue, bets, deposits, withdrawals and risky events on one live screen
- The admin home is a 3D stats board — numbers roll over and new values flash
- Players, partners, casino, payments, notices and support in one admin
- Every change logged — who, when and what

AI automation system

AI support agent

Answers in any language, incl. crypto and wallet questions · money issues go straight to staff

AI guardrails

Off-topic chats closed politely · abuse warned, then auto-restricted

AI translation

Notices, events and prediction markets auto-translated · team and league names localized

AI quality checks

Screens, text and performance verified by automated tests every release

Operations automation — alerts to support, hands-free

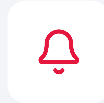

Built in

AI-automated support desk

AI answers player inquiries instantly from your site rules, and hands money or account issues straight to your staff.

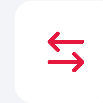

- Intake → triage → answer → staff handoff
- Any language · 24/7
- Off-topic chats closed politely

01

Automatic alerts

Deposits, big bets, risky matches and inquiries pushed to the admin and SNS

02

Automated cashier

Crypto deposits auto-convert to balance; withdrawals approved in one ledger

03

Access & risk control

IP allow-lists, 2FA, role-based menus; live bet limits and odds floors

04

Fraud-bet prevention

Stale-odds abuse blocked, locked markets stop instantly, no double processing

05

Easy authentication

Simple sign-up and login, plus new-IP alerts and OTP two-factor

06

AI-driven management

AI translation, QA and guardrails take repetitive work off your team

Why no one can simply copy it

01

An invisible engine

Core decisions live only on the server. No amount of screen analysis reveals the rules.

02

Experience built on real data

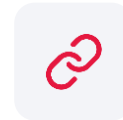

Edge cases found by recording real match data — AI and new teams start without them.

03

Six layers of security

Network, access, accounts, money, code and traffic. If one fails, the next one holds.

04

Integration already done

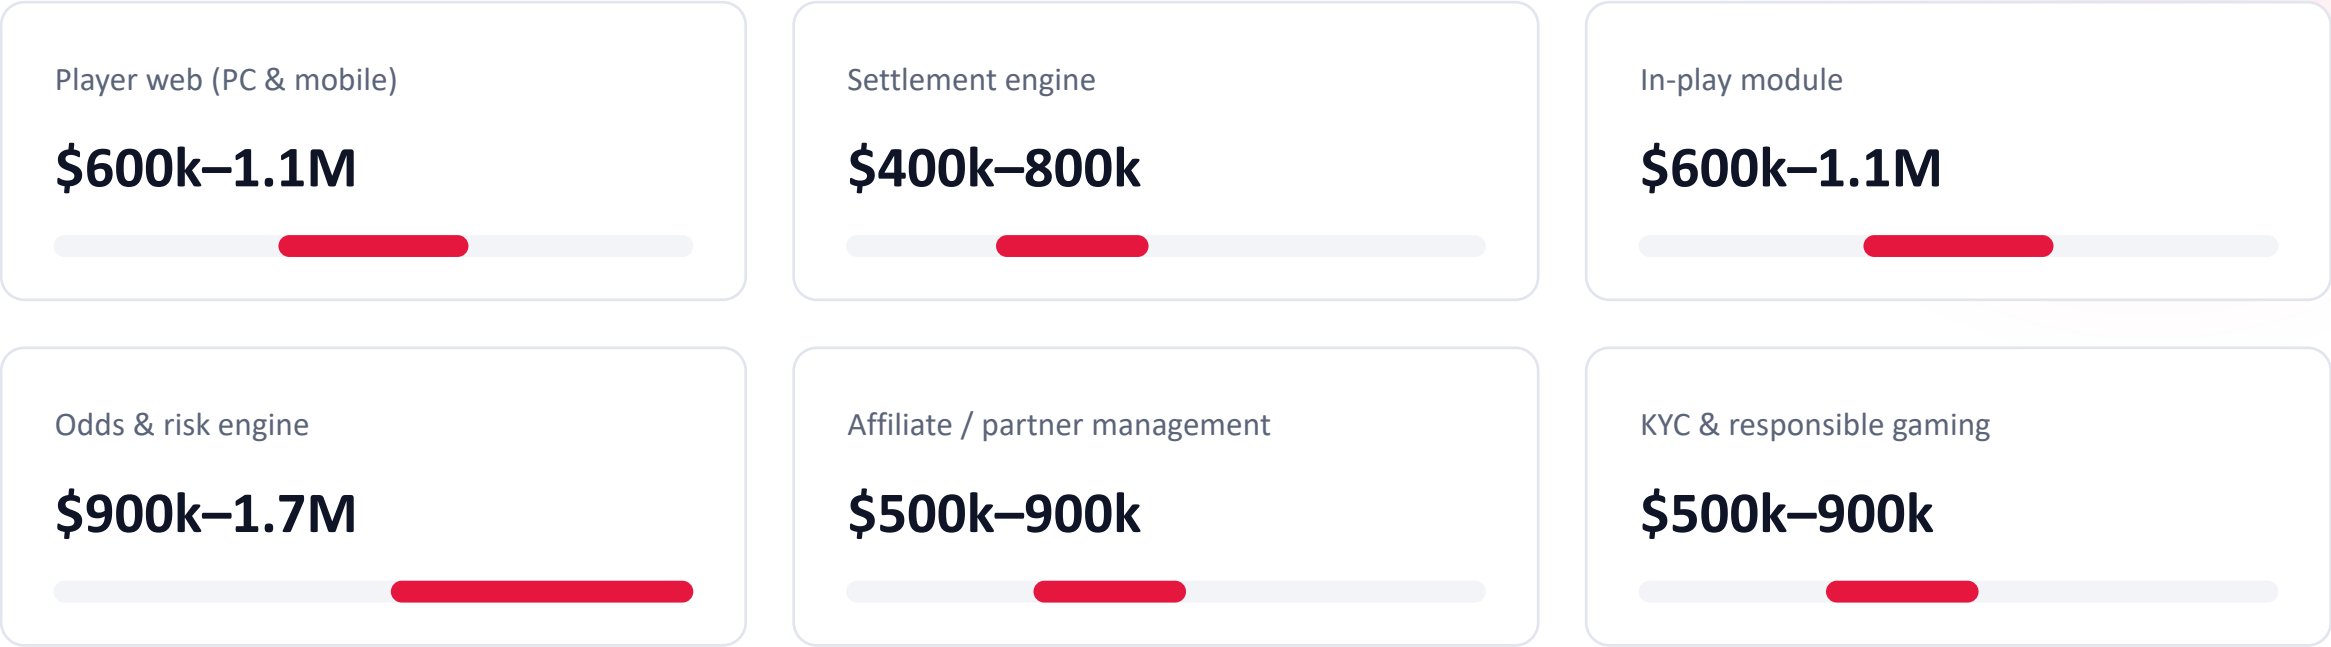

Odds, casino, prediction markets, crypto and AI already share one ledger — months of work on their own.

Build vs rent vs BETSTOA

Approach	Cost	Time	Ownership
White label (rent)	\$50k–100k+ setup + 10–30% of revenue, forever	Weeks	None ✕
Turnkey operation	\$50k–250k + 5–8% revenue + \$20k–100k/month minimum	Weeks–months	None ✕
Large custom build	\$3M–8M + \$1M–2M certification	24+ months · 15–20 developers	Yes ✓
BETSTOA	Fixed price · no revenue share	Now · install support	Proprietary engine source included

Market sources: Track360 Buy vs Build 2026, RaftLabs cost analysis and other public data (as of 2026-10-11)

Market value

About \$5M on average at current vendor rates — with the proprietary engine and further development, a market value of \$10M

About BUKCS

Engineering the Intelligence Revolution

BUKCS is an AI engineering company that designs AI business operating systems and orchestration, and proves them through products it builds itself.
BETSTOA is a complete platform built on that engineering capability.

Research & development

BUKCS Co., Ltd. — R&D entity in Korea

Global business

BUKCS — global product delivery and expansion
